Material Compliance Contact Information

REACH / RoHS

01

For general questions regarding REACH / RoHS,
please contact GG Group via:

material.compliance@gg-group.com

For the latest news and updates, please follow the official channels:

REACH: <https://echa.europa.eu/de/home>

RoHS: <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A02011L0065-20210401>

GG Group would like to point out that the submission of a valid REACH declaration is required after each update of the SVHC list. These updates normally take place in January and June.

Conflict Minerals / EMRT

02

GG GROUP HAS THE AMBITION TO ITSELF AND ITS SUPPLIERS THAT ALL OUR PRODUCTS ARE CONFLICT MINERAL FREE.

For general questions regarding CMRT / EMRT, please contact GG Group via:

material.compliance@gg-group.com

“Conflict minerals” currently include the metals tantalum, tin, tungsten and gold.

The EMRT (Extended Minerals Reporting Template) combines the cobalt and mica reports. Therefore, separate cobalt and mica reports are no longer valid.

Cobalt is used for in batteries that are part of electric automobiles, mobile phones and laptop computers. Multiple reports highlighted concerns over social and environmental impact of cobalt extraction, including child labor and unsafe working conditions in cobalt mining.

Mica represents 37 types of minerals and is known for its application in cosmetic products and paint. It is also used for isolation and heat resistance, and therefore it can be found in some components of automotive and electronic products.

IMDS / CAMDS

03

For any questions related to IMDS / CAMDS
please contact:

Wires: s.kollmann@gg-group.com | s.neusser@gg-group.com

Harness: imds.harness@gg-group.com

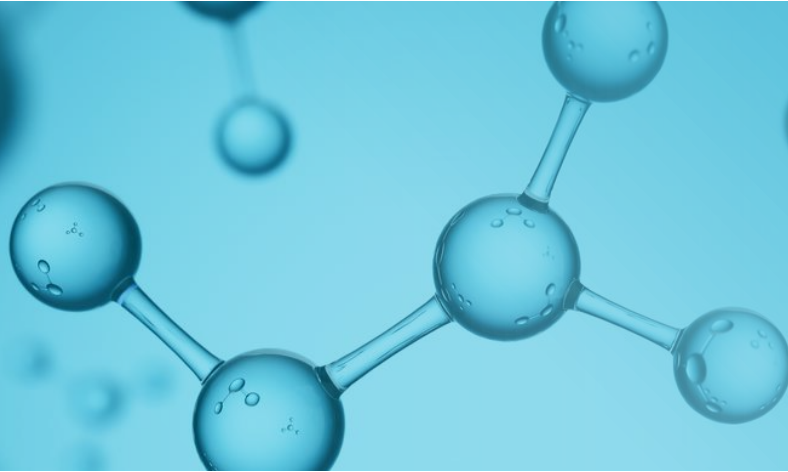

On request, a declaration **in other formats such as CAMDS** (= Chinese Automotive Material Data System) has to be created.

GG Group would like to remind its suppliers to regularly check their IMDS information and to ensure that it is always up to date in case of changes in GADSL or other legislation affecting products supplied to GG. (e.g., REACH SVHC)

Substance Restrictions

04

Substance regulations are becoming more and more extensive worldwide. The dates for the restriction or phase-out of substances are published in advance in the legislation.

As the process of finding substitutes can be time-consuming, suppliers are expected to declare the presence of any substance that is going to be prohibited as soon as the expiration date is published.

As we are a globally operating company and therefore sell our products globally, it can occur that we also request confirmations for US TSCA, EU POP, China RoHS or CP65 in addition to REACH.

Material Compliance Contact Information
